Introduction to Bioimage Analysis using QuPath

Antoine A. Ruzette & Simon F. Nørrelykke

Image Analysis Collaboratory

Workshop plan

1. Introduction to digital image analysis
2. Installing QuPath and your first project
3. GUI layout and toolbars
4. Introducing objects: annotations and detections
5. Saving, sharing and receiving QuPath projects
6. Nuclei detection and measurements (incl. StarDist)
7. Cell classification
8. Automating tissue annotations (pixel classifier)
9. Advance topic: scripting and workflows

Acknowledgments

- **Pete Bankhead et al.**
 - QuPath and its amazing documentation
- **Peter Sobolewski**
 - *Introduction to QuPath* workshop at the The Jackson Laboratory
- **Nina Kozlova**
 - Whole-slide image used in this workshop

Self-introductions

1. My **name** is *Antoine*
2. My **position** is as an *Associate in Systems Biology*
3. My **lab** is *the Image Analysis Collaboratory and the Megason Lab*
4. I have *confocal microscopy images* of *cancer tissues, embryos, ...*
5. A **fun fact** about me is *I used to be a brewer*

Self-introductions

1. **Motivate** the use of algorithms in image analysis
2. **Introduce** some image-analysis nomenclature
3. **Learn** to use QuPath effectively and reproducibly

Reasons to learn image processing

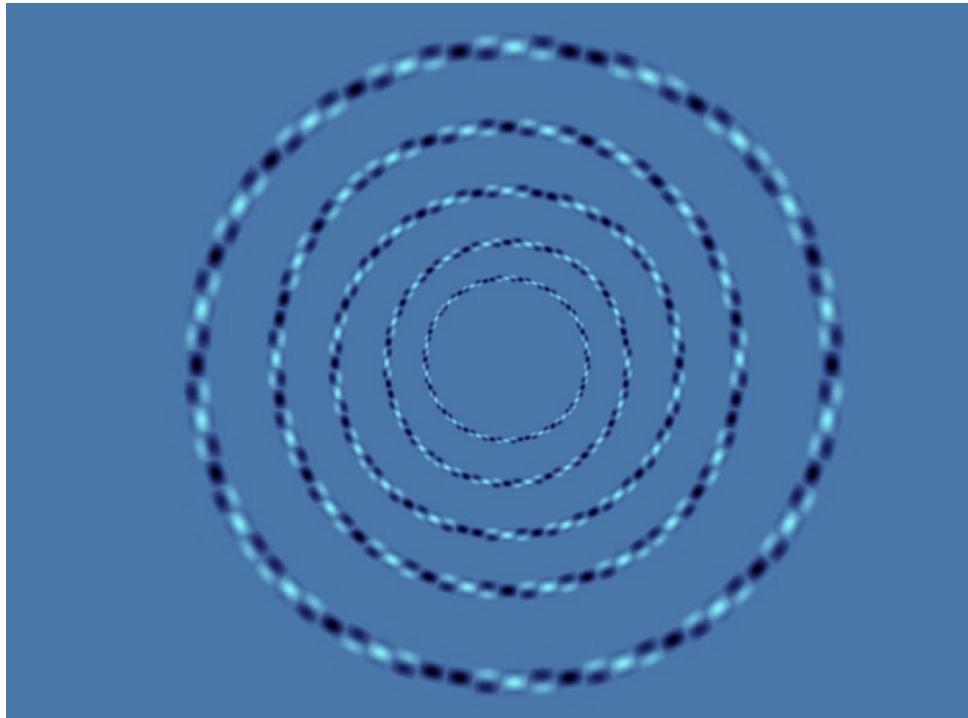

- Make pretty pictures (processing)
 - publications, talks, websites, ...
- Get numbers out of pictures (analysis)
 - cell sizes, vessel lengths, GFP expression level, ...
- Make experiment possible (automation)
 - whole-genome screen: millions of images
- Objectivity and Reproducibility
 - in science, it's your duty!

Reasons not to learn image processing

none

Why should we analyze images with computers at all?

Color perception and pattern recognition is individual – science less so

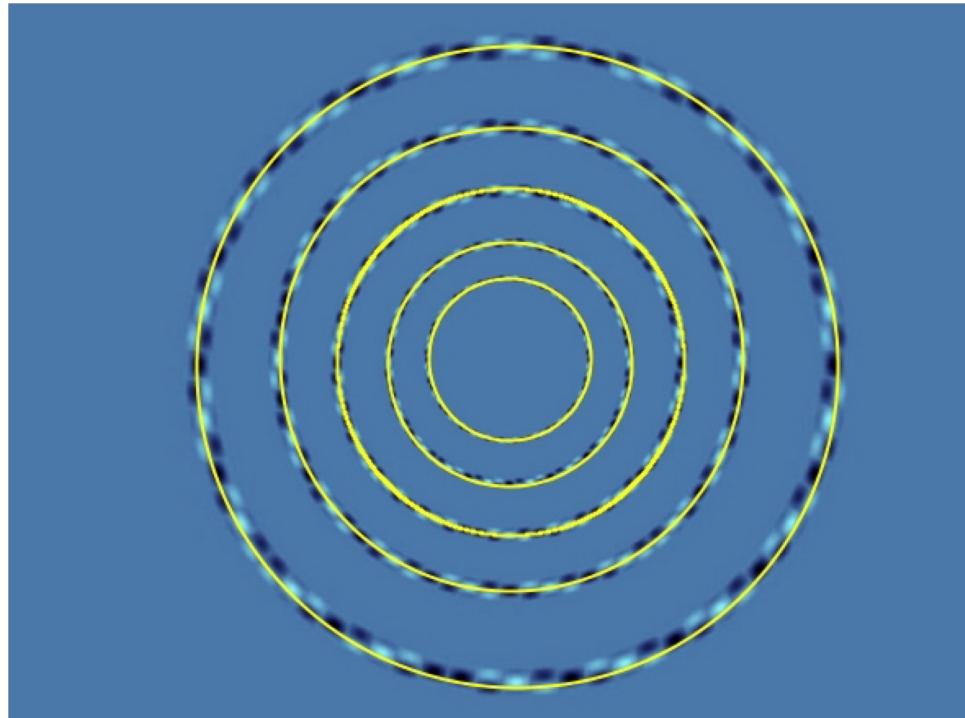

<https://www.moillusions.com/perfect-circles-optical-illusion/>

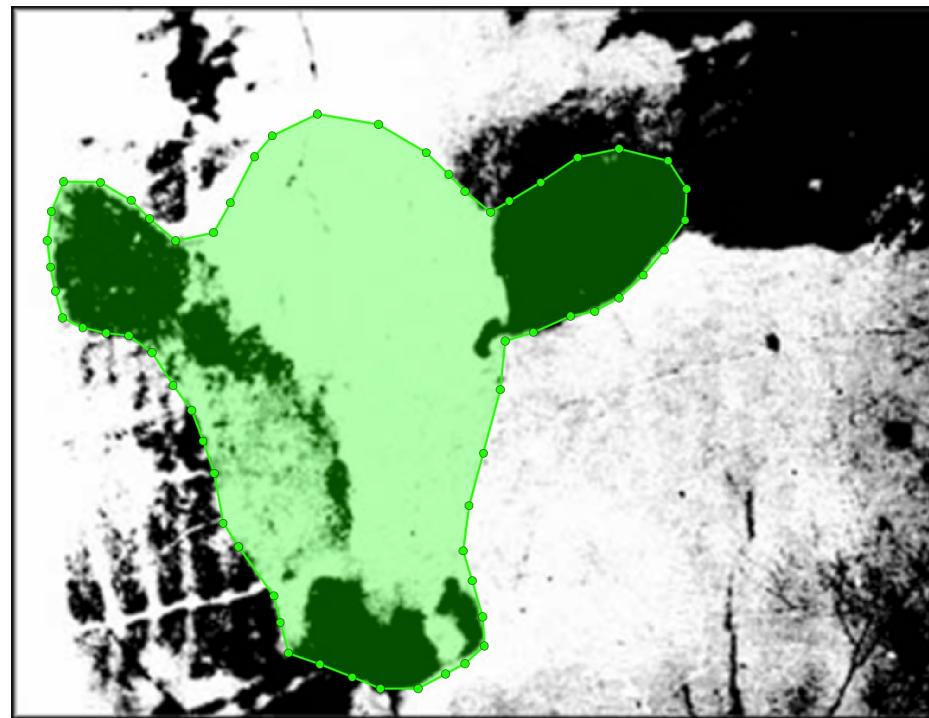

<http://www.brainbashers.com>

Color perception and pattern recognition is individual – science less so

<https://www.moillusions.com/perfect-circles-optical-illusion/>

<http://www.brainbashers.com>

In other words,

“Each human brain is a very complex neural network trained on different data – predictions will vary”

Antoine

A typical image analysis workflow

- There are typically *five* steps in an image analysis
- Often a good idea to structure work along these lines before starting

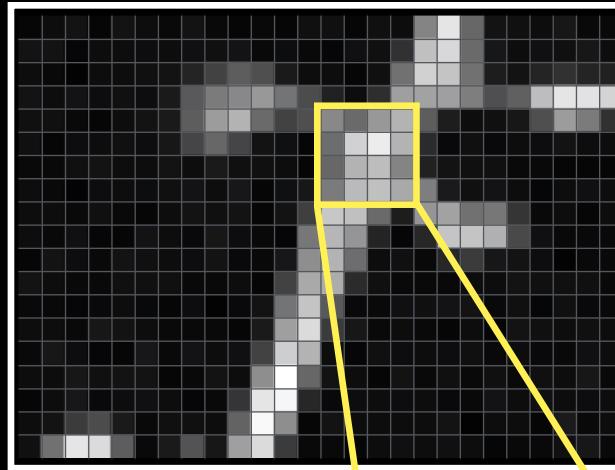

Think of this even ***before*** you acquire the images!

otherwise image analysis may become only a *post-mortem* on your experiment

What is an image?

A digital image is a matrix of numbers!

123	186	192	169

Display images: color, brightness & contrast

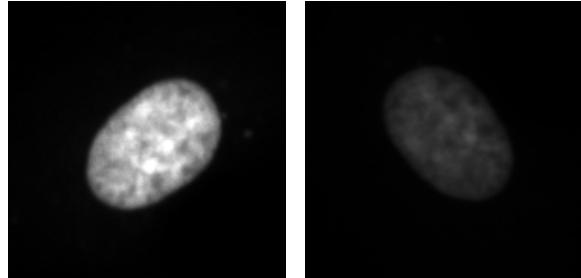

- If you are imaging a blue fluorophore, you are not forced to display it in blue!
- Pixel histogram represents the distribution of pixel values in the image
- LUT range

*You are **NOT** changing the pixels values, you are just changing how the image is displayed (unless you click on the "Apply" button).

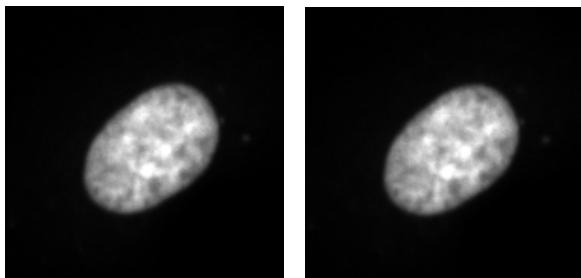

Display a file: Brightness & Contrast

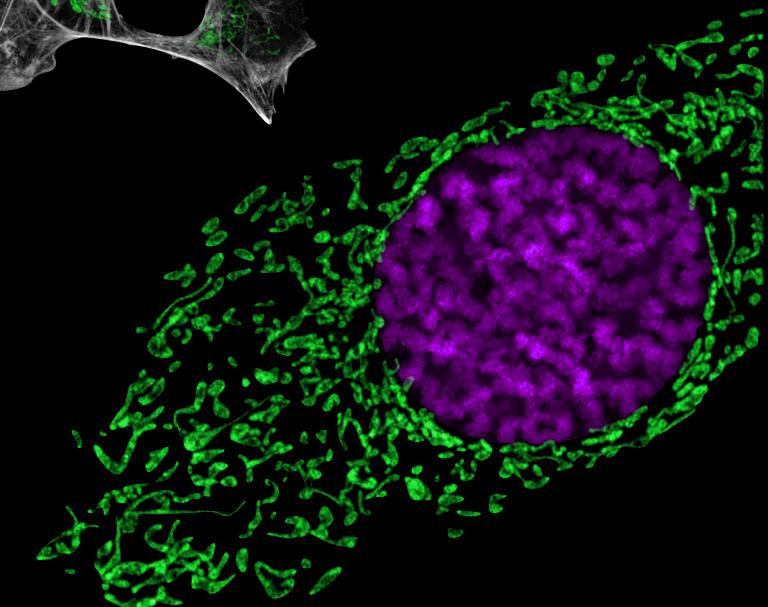

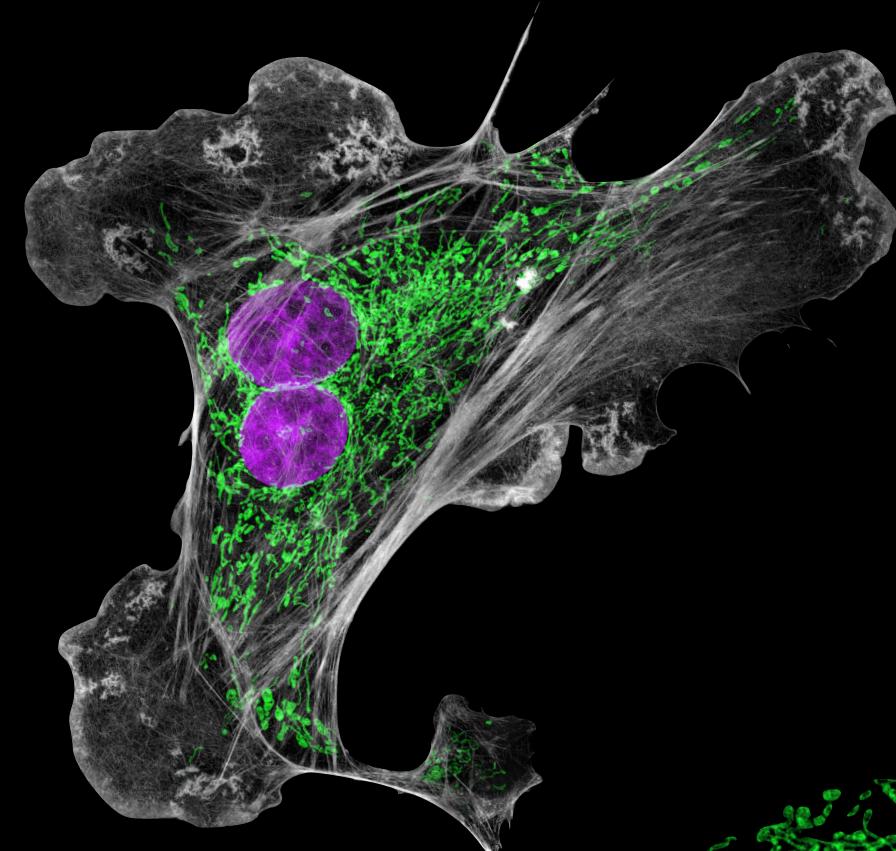

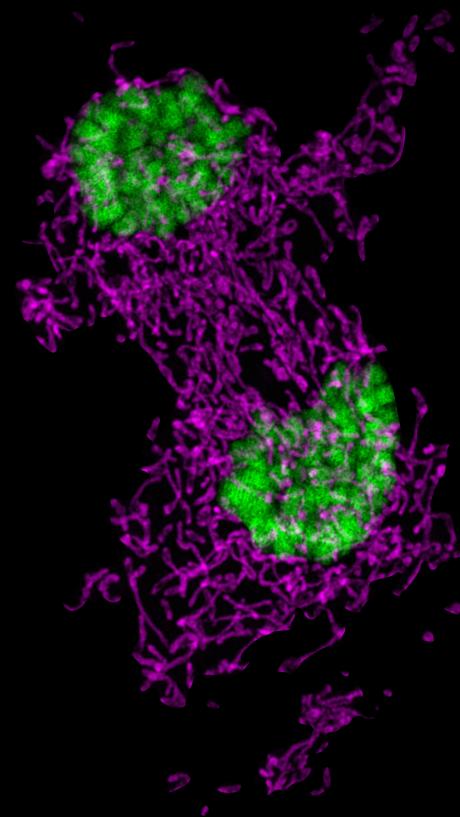

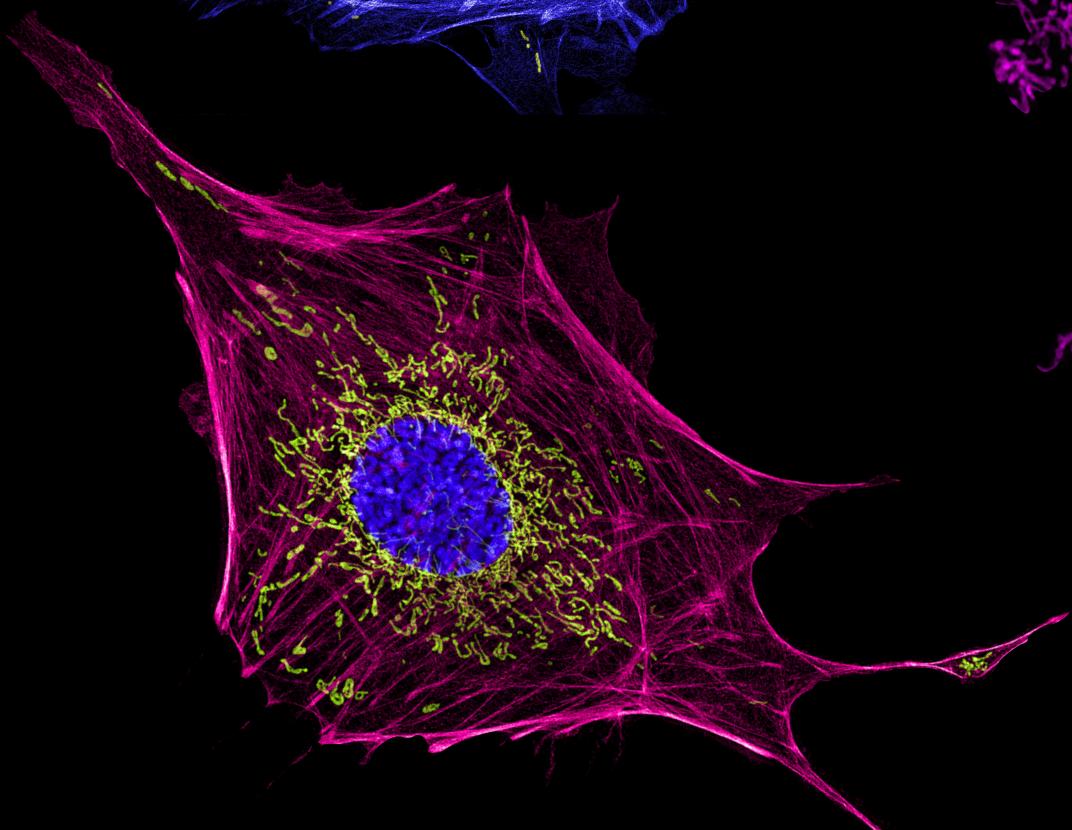

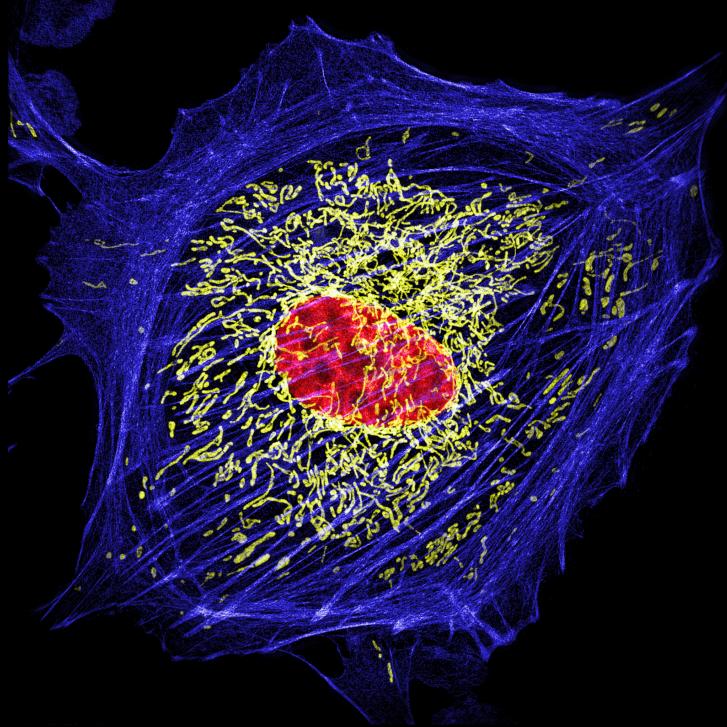

Which image has more fluorescence?

Mean:	4803	4803
Display range:	188- 16828	188- 45514

Mean:	4803	4803
Display range:	188- 16828	188- 16828
